Hiring Manager

Principal Software Engineer Search

6sense

San Francisco, California, United States

Subject: Application for Principal Software Engineer Position

Dear Hiring Manager,

I am writing to express my keen interest in the Principal Software Engineer position at 6sense, as advertised on your company website. With over two decades of experience architecting and delivering large-scale, innovative software solutions, I have built a career on transforming complex business requirements into scalable, efficient, and maintainable systems. My background in leading cloud architecture, pioneering GenAI applications, and driving digital transformation aligns perfectly with 6sense's mission to revolutionize B2B revenue generation.

Your requirements seek a leader with deep expertise in software design and architecture. As a hands-on Director of Cloud Architecture and former Senior Cloud Engineer at McKinsey & Company, I have consistently led the architecture of complex systems. This includes designing comprehensive Infrastructure as Code (IaC) with Terraform, architecting AI-powered RAG platforms following SOLID principles and Clean Architecture, and building custom AWS monitoring systems. My work has directly involved creating scalable microservices, event-driven architectures, and refactoring legacy mainframe EDA systems to modern AWS serverless paradigms using EventBridge, Lambda, and Step Functions.

The position calls for proficiency in multiple programming languages and cloud technologies. My daily programming languages include Python, TypeScript/JavaScript, Java, and Terraform. I have extensive, hands-on experience with the full spectrum of AWS services (EC2, EKS, S3, IAM, Lambda, etc.), GCP, and Azure, which I have used to build and migrate mission-critical systems for major enterprises.

Furthermore, I have a proven track record of providing technical leadership, mentoring engineers, and promoting best practices. At Barclays, I served as VP, Lead Architect Engineer, where I established group-wide distributed system architecture, authored architecture handbooks, and led a 30-member working forum to define technology strategy and drive cloud adoption. I am passionate about mentoring teams on modern software design patterns, infrastructure-as-code, and DevOps automation to foster a culture of innovation and reliability.

I am excited by the prospect of contributing to 6sense's industry-leading technology and being part of a team

that values accountability, a growth mindset, and integrity. I am confident that my experience in building predictive, AI-driven platforms and scalable cloud infrastructure would allow me to immediately contribute to your success.

Thank you for your time and consideration. I have attached my resume for your review and look forward to discussing how my skills and experiences can benefit 6sense.

Sincerely,
Yongjun Rong
