Hiring Manager
Addepar
[Company Address]
[City, State, ZIP Code]

Dear Hiring Manager,

I am excited to apply for the Staff Automation Engineer position at Addepar, where my passion for building scalable automation frameworks and my extensive experience in enhancing developer productivity align seamlessly with your mission to empower investment professionals with precise, data-driven solutions. With a Master of Computer Science from Texas Tech University (GPA: 4.0/4.0) and over 20 years of experience in software engineering, I am eager to drive technical innovation, reduce technical debt, and foster operational excellence within Addepar's global platform.

In my current role as Director of Cloud Architecture at Biophy, I architected a modular Infrastructure as Code (IaC) framework using Terraform and AWS (EKS, S3, Lambda), streamlining the SDLC for an AI-powered platform. I integrated CI/CD pipelines with Jenkins, automating deployments and test data generation, which reduced lead time for changes by 40% and improved deployment frequency, aligning with DORA metrics. At McKinsey & Company, I led the migration of legacy mainframe systems to a cloud-native architecture using Java, Python, and Databricks, implementing comprehensive integration and contract testing to ensure system reliability. These experiences demonstrate my ability to design scalable automation solutions and optimize service-oriented architectures (SOA), critical for Addepar's developer enablement goals.

My expertise in Python, Java, TypeScript, and JavaScript, combined with hands-on experience in CI/CD orchestration (Jenkins, Bamboo) and containerization (Docker, Kubernetes), equips me to enhance Addepar's automation frameworks. At Yotascale, I built a cross-cloud analytics platform, integrating centralized software catalogs to improve service discoverability and compliance, akin to Addepar's focus on software cataloging. At Comcast, I developed an AutoBuild system for over 200 microservices using Ruby, Bash, and Maven, achieving 90% test coverage with automated testing frameworks, and implemented automated rollbacks to enhance deployment reliability. These efforts directly support Addepar's goals of streamlining SDLC and ensuring quality through robust test automation.

As a technical leader, I have a proven track record of mentoring engineers and driving cross-team alignment. At Biophy, I guided teams on Clean Architecture and AWS best practices, while at Comcast, I collaborated with DevOps and engineering teams to standardize CI/CD pipelines, improving release consistency. My commitment to acting like an owner and embracing learning, as reflected in my open-source JSON resume framework using Node.js and CSS3, aligns with Addepar's values of innovation and community engagement. I am inspired by Addepar's global impact in managing over \$7 trillion in assets and am eager to contribute my technical expertise, leadership, and passion for developer enablement to drive your platform's success.

Thank you for considering my application. I would welcome the opportunity to discuss how my skills can support Addepar's automation and quality initiatives. Please feel free to contact me at 856-408-4027 or rongyj@hotmail.com to schedule a conversation.

Sincerely,
Yongjun Rong
