Subject: Application for Cloud DevOps Engineer Position

I am excited to apply for the Cloud DevOps Engineer position at Bitcoin Depot. With extensive experience in cloud infrastructure design, automation, and migration across AWS, GCP, and Azure, I am confident in my ability to contribute to your team's efforts in migrating applications to AWS and optimizing system performance.

In my current role as Director of Cloud Architecture at Biophy, I designed and implemented comprehensive Infrastructure as Code (IaC) solutions using Terraform/Terragrunt, importing and redesigning AWS resources to align with best practices. I developed modular Terraform configurations, established security controls, and automated validation procedures, ensuring scalable and secure cloud operations. Additionally, I created a custom AWS CloudWatch alerting system leveraging Lambda, SQS, and SNS for robust monitoring—skills directly applicable to Bitcoin Depot's infrastructure needs.

During my tenure as Senior Cloud Engineer II at McKinsey & Company, I led the migration and refactoring of complex mainframe EDA systems to AWS serverless architectures using EventBridge, Lambda, Step Functions, SQS, and SNS. I also designed reusable Terraform modules and implemented monitoring solutions with CloudWatch, ensuring high availability and performance. My work scaling RAG vectorstores (ChromaDB) for AI-powered systems further demonstrates my expertise in managing distributed, high-performance cloud environments.

Earlier, as Technical Infrastructure/DevOps Architect at Gigster Inc., I architected AWS infrastructure for microservices and EDA on EKS, automating deployments with Terraform and Kubernetes. I developed dynamic IAM policies, S3 access controls, and ALB configurations, aligning with Bitcoin Depot's focus on secure, scalable infrastructure.

My technical proficiencies include:

- Cloud Platforms: AWS (EC2, ECS, EKS, VPC, ALB, IAM, S3, Lambda, CloudWatch), GCP,

Azure.

- DevOps Tools: Terraform, Terragrunt, Docker, Kubernetes, GitHub Actions, CI/CD pipelines.
- Security: AWS Well-Architected Framework, least-privilege IAM, VPC, ACLs, WAFs.
- Monitoring/Alerting: CloudWatch, EventBridge, SNS, custom Lambda-based solutions.
- Scripting/Programming: Python, Java, JavaScript, Bash, Ruby.

Bitcoin Depot's mission to innovate in the Bitcoin ATM space resonates with my passion for cutting-edge cloud technologies. I am eager to bring my expertise in cloud migrations, IaC, and DevOps automation to your team. I welcome the opportunity to discuss how my background aligns with your needs.

Thank you for your time and consideration. I look forward to your reply.

Best regards,
Yongjun Rong
