Hiring Manager
Cadence
Remote

Dear Hiring Manager,

I am excited to apply for the Senior Software Engineer position on the Automations team at Cadence. With over two decades of experience designing and building scalable backend systems, including AI-powered platforms, I am eager to contribute to Cadences mission of transforming U.S. healthcare through proactive, population-level care. My expertise in Python, cloud environments like AWS, and relational databases such as PostgreSQL, combined with my experience in high-growth startups, aligns closely with the responsibilities of this role.

As Director of Cloud Architecture at Biophy since February 2025, I have led the development of an AI-powered Retrieval-Augmented Generation (RAG) platform using Python, Django, Pydantic, and the OpenAI API. This work involved designing modular data ingestion pipelines and deploying them on AWS, leveraging Terraform and Kubernetes to ensure scalability and reliability. My experience with large language models (LLMs) and production-grade AI deployments directly supports Cadences goal of scaling personalized care to millions of patients using emerging AI technologies.

At McKinsey Company from 2021 to 2025, I architected generative AI systems and data pipelines using PySpark, Databricks, and FastAPI, integrating PostgreSQL for efficient data management. I collaborated closely with product owners to deliver scalable microservices on AWS EKS, aligning with Cadences need for robust platform services. My work scaling ChromaDB vector stores for a chatbot copilot and implementing prompt engineering for NLP tasks demonstrates my ability to leverage AI to meet complex requirements, a key aspect of this role. Additionally, my experience at Yotascale, where I built a cloud cost analytics platform with Kubernetes, Istio, and PostgreSQL, honed my skills in high-velocity, greenfield initiatives in fast-paced environments.

I have a strong track record of improving engineering standards and processes. At Barclays, as VP, Lead Architect Engineer, I authored architecture handbooks and mentored over 30 engineers, fostering a culture of high-quality software development. My commitment to clean code, SOLID principles, and modern design patterns ensures I can contribute to Cadences high engineering standards. My experience in incident response and operating production systems on AWS further prepares me to support Cadences platform reliability.

I thrive in collaborative, fast-paced settings and am passionate about using technology to drive meaningful outcomes, as evidenced by my hobby projects exploring AI and cloud-native tools like Docker. My work in hyper-growth startups like Yotascale equips me to handle Cadences rapid

scaling needs. I am excited to join a team that moves fast, raises standards, and owns outcomes to improve lives through better healthcare.

Thank you for considering my application. I look forward to discussing how my skills and experiences can help Cadence scale its remote patient monitoring platform. Please contact me at 856-408-4027 or rongyj@hotmail.com to schedule a conversation.

Sincerely,
Yongjun Rong
