Hiring Team
CoreWeave
Remote

Subject: Application for Senior Production Engineer - Kubernetes Infrastructure Dear Hiring Team,

I am writing to express my interest in the Senior Production Engineering role at CoreWeave. With over 10 years of experience building and scaling high-availability Kubernetes environments, automating infrastructure, and optimizing AI/ML workloads including roles at McKinsey, Yotascale, and Barclays I am confident my expertise aligns with CoreWeaves mission to power next-generation AI through resilient, performant cloud platforms.

Key Qualifications:

1. Kubernetes at Hyperscale

- Managed 500+ node EKS/AKS clusters at Barclays and Yotascale, deploying custom operators for financial data processing and cloud cost analytics.
- Built Terraform automation to dynamically provision EKS clusters (IAM roles, ALB controllers, Helm charts) and ensure zero-touch operations.

2. Infrastructure Automation & Observability

- Developed custom CloudWatch alerting systems (Lambda/SQS/SNS) at Biophy for proactive issue detection, reducing MTTR by 40%.
- Implemented monitoring frameworks (CloudWatch, ELK, Splunk) for distributed systems at McKinsey and Comcast, including metrics-driven Terraform modules.

3. Incident Response & Resilience

- Led blameless post-mortems for critical systems (IBM MQ migrations at McKinsey), designing retry mechanisms and chaos testing protocols.
- Engineered HA solutions (Linux HA clusters, Istio service mesh) for Git repos and Maven artifacts at Comcast, achieving 99.99% uptime.

4. AI Workload Optimization

- Scaled RAG vector stores (ChromaDB/Milvus) for AI chatbots at McKinsey, implementing parallel OpenAI API calls and chunking systems.
- Optimized PySpark/Databricks pipelines for genAI data transformations using Python/asyncio.

5. Technical Stack Alignment

- *Languages*: Daily use of Go (listed in resume), Python, Bash, and Terraform for IaC.
- *Tools*: Kubernetes (EKS/AKS/GKE), Prometheus/Grafana alternatives (CloudWatch, ELK), and Linux/container ecosystems.

Why CoreWeave?

CoreWeaves focus on GPU-accelerated AI infrastructure resonates with my work on genAI systems at McK-insey and real-time data pipelines at Boomi. As an engineer who thrived in scaling Barclays cloud migration (500+ apps) and Yotascales multi-cloud analytics platform, I am eager to contribute to environments where "adaptability and resilience are key." Your emphasis on operational excellence mirrors my approach: I reduced alert fatigue through SQS-based deduplication and built self-healing systems (e.g., HAProxy failover scripts at Gigster).

I would welcome the opportunity to discuss how my Kubernetes and SRE experience can help CoreWeave maintain industry leadership in AI hyperscaling. Please contact me at 856-408-4027 or rongyj@hotmail.com to schedule a conversation.

Sincerely,
Yongjun Rong
