Hiring Manager
Coupa Software, Inc.
Remote

Dear Hiring Manager,

I am thrilled to apply for the Senior Principal AI Architect position at Coupa Software, Inc. With over two decades of experience architecting scalable, AI-driven systems and leading cross-functional engineering teams, I am eager to contribute to Coupas vision of revolutionizing global trade through Agentic AI and an Autonomous Buyer-Supplier Network. My extensive expertise in Python, cloud architecture, and AI system design, combined with my proven leadership in mentoring engineers and driving innovation, aligns seamlessly with the responsibilities of this role.

As Director of Cloud Architecture at Biophy since February 2025, I have led the design and implementation of an AI-powered Retrieval-Augmented Generation (RAG) platform, utilizing Python, Django, Pydantic, and the OpenAI API. This project involved architecting modular data ingestion pipelines and leveraging Clean Architecture principles to ensure scalability, directly applicable to Coupas need for intelligent, adaptive systems in spend management. I also developed a custom AWS CloudWatch alerting system with Lambda, SQS, and SNS, demonstrating my ability to deploy production-grade microservices on major cloud providers like AWS, a core requirement for this role.

During my tenure at McKinsey Company from 2021 to 2025, I spearheaded the development of generative AI systems with RAG and multi-agent orchestration, accelerating mainframe migrations and data pipeline development using PySpark, Databricks, and FastAPI. My work included prompt engineering and scaling ChromaDB vector stores for a chatbot copilot, showcasing my expertise in Agentic AI frameworks and complex AI system architecture over the past two years. I also led the migration of mainframe EDA systems to AWS serverless architectures using EventBridge, Lambda, and EKS, aligning with Coupas emphasis on scalable cloud services. My leadership in mentoring engineers and establishing technical standards across teams equipped me to influence and guide 50+ engineers, as required for this position.

At Yotascale and Barclays, I architected cloud cost analytics platforms and led enterprise-wide cloud adoption, respectively, using Terraform, Kubernetes, and microservices. These experiences honed my ability to own end-to-end platform architectures, create canonical APIs, and drive proofs of concept, directly relevant to Coupas goals of democratizing AI and accelerating innovation through hierarchical agent memory and RAG pipelines. My role as VP, Lead Architect Engineer at Barclays involved hosting architecture forums and authoring technical design documents, preparing me to lead by influence, mentor senior engineers, and represent Coupa at AI conferences.

I am passionate about pushing the boundaries of AI and cloud technology, as evidenced by my

hobby projects exploring multi-agent systems and cutting-edge tools like Docker and Kubernetes. My collaborative approach, fluency in English and Chinese, and commitment to fostering innovation make me an ideal fit for Coupas culture and mission. I am excited to contribute to building a next-generation Autonomous Spend Management platform that empowers businesses globally.

Thank you for considering my application. I look forward to discussing how my skills and experiences can drive Coupas AI vision forward. Please contact me at 856-408-4027 or rongyj@hotmail.com to schedule a conversation.

Sincerely,
Yongjun Rong
