Mathematica Talent Acquisition

PO Box 2393, Princeton, NJ 08543-2393

Re: Director of AI Transformation (Job ID 2306)

Dear Hiring Manager,

I am writing to express my keen interest in the Director of AI Transformation position (Job ID 2306) at Mathematica, as advertised. With over two decades of hands-on experience architecting and delivering large-scale, transformative technology solutions—with a recent, intense focus on generative AI and cloud-native modernization—I am confident that my proven leadership and technical expertise align perfectly with the core responsibilities of this role.

Your job description calls for a “leader-doer” who can set the vision and implement solutions. My resume demonstrates this exact blend of strategic leadership and deep technical execution. As a hands-on Director of Cloud Architecture at Biophy, I am currently designing and implementing comprehensive Infrastructure as Code and leading the development of an AI-powered RAG platform from the ground up. This includes prompt tuning, designing chunking systems to manage token limits, and implementing parallel API calls to optimize performance—direct, hands-on experience in delivering measurable AI solutions.

Furthermore, at McKinsey & Company, I was at the forefront of applying genAI to accelerate business outcomes. I led the development of genAI systems with RAG and multi-agents to accelerate mainframe migration and built comprehensive genAI solutions to speed up data pipeline development. This involved not just the technical implementation but also mentoring engineers on prompt engineering and establishing robust development standards—a testament to my ability to lead enterprise-wide change management and foster AI adoption.

My experience extends beyond recent AI work to encompass the full spectrum of technology required for this role. I have a proven track record in:

- Digital Transformation & Strategy: Leading cloud adoption journeys for hundreds of applications at Barclays and modernizing legacy EDA systems to AWS serverless architectures at McKinsey.
- Governance & Security: Establishing comprehensive security controls, IAM policies, and monitoring standards across all my roles, ensuring solutions are secure and compliant by design.
- Cross-Functional Leadership: Directing working groups of 30+ members to define technology strategy at Barclays and collaborating across frontend, backend, and data engineering teams to deliver complex solutions.

I am particularly drawn to Mathematica's mission of using data and expertise to improve well-being. The opportunity to apply my skills in AI and digital transformation to support such impactful work is highly compelling. I am confident that I can help shape and execute Mathematica's AI strategy, from identifying high-value use cases and overseeing their implementation to establishing the governance and change management frameworks necessary for sustainable, ethical, and successful adoption.

My resume provides further detail on my qualifications and accomplishments. I am eager to discuss how my hands-on leadership in AI transformation can contribute to Mathematica's continued success. Thank you for your time and consideration.

Sincerely,  
Yongjun Rong
