Hiring Team
Viant
Remote

Subject: Application for Technical Lead - Demand Side Platform (DSP) Dear Hiring Team,

I am writing to express my interest in the Technical Lead position for Viant's Demand Side Platform (DSP). With over 25 years of experience architecting and scaling distributed systems, microservices, and cloud-native platforms including 12+ years in senior engineering roles, I am confident my expertise aligns with Viant's needs for a leader who can drive technical vision, reduce operational load, and mentor teams in fast-paced environments.

Key Qualifications:

1. Complex Backend Systems & Microservices

- Built genAI-powered data platforms at McKinsey using Python/FastAPI and event-driven architectures (EventBridge, Lambda, SQS) to process high-volume data pipelines on Databricks/PySpark.
- Architected cross-cloud analytics systems at Yotaskale (AWS/Azure/GCP) using Java/Kotlin microservices, Kubernetes (EKS/AKS), and relational databases (PostgreSQL, MySQL, Oracle).

2. Relational Database Mastery

- Optimized Oracle DB, PostgreSQL, and MySQL for enterprise-scale applications at Oracle, Barclays, and Boomi, including complex SQL queries, schema migrations, and performance tuning.
- Designed data ingestion systems with robust SQL/NoSQL integrations (DynamoDB, Cassandra) for real-time processing at Comcast and Barclays.

3. Scalable Cloud Infrastructure

- Led AWS migrations for 500+ applications at Barclays, implementing serverless architectures (Lambda, Step Functions) and multi-region deployments with Terraform.
- Automated Kubernetes-based platforms (EKS/AKS) at Gigster and Yotaskale, reducing operational overhead by 40% through IaC and CI/CD pipelines.

4. Technical Leadership & Mentorship

- Mentored engineering pods at McKinsey and Barclays in microservices best practices, SOLID principles, and operational sustainability.
- Drove cross-functional collaboration with Product/Design teams to deliver AI-powered RAG platforms and mainframe modernization initiatives.

Alignment with Viants DSP:

While I do not have direct AdTech experience, my background in building high-throughput systems such as event-driven architectures for financial data (Barclays) and real-time scraping/ingestion platforms (Bio-phy) equips me to tackle DSP complexities. My proficiency in Java (12+ years) and cloud ecosystems (AWS/Azure) complements your stack, and I am eager to contribute to Viants mission of evolving scalable, operationally sustainable ad-tech solutions.

I would welcome the opportunity to discuss how my experience in distributed systems and technical leadership can support Viants DSP innovation. Please contact me at 856-408-4027 or rongyj@hotmail.com to schedule a conversation.

Sincerely,
Yongjun Rong
