Hiring Manager
Affirm
Remote, US

Dear Hiring Manager,

I am excited to apply for the Distinguished Software Engineer position at Affirm, where my 20+ years of experience architecting scalable, consumer-focused systems align with your mission to deliver transparent financial solutions. With a Master of Computer Science from Texas Tech University (GPA: 4.0/4.0), I am eager to lead the technical vision for Affirm's Decisions Foundations Engineering Group, driving innovation in Purchasing, Credit Underwriting, and Machine Learning Infrastructure.

At Biophy (2025-Present), I architected a **Python** and **Terraform**-based IaC framework on **AWS** (EKS, S3, Lambda), automating AI platform deployments, reducing errors by 40%, and ensuring high availability for data-intensive systems, akin to Affirm's ML infrastructure needs. At McKinsey (2021-2025), I led mainframe-to-cloud migrations using **Java**, **Kotlin**, and **Databricks**, designing scalable microservices for financial systems, optimizing pricing and risk models, and mentoring senior engineers on Clean Architecture. My fintech experience at Barclays (2017-2020) included building **JVM**-based event-driven systems with **Kafka** and **MySQL**, streamlining credit-related workflows.

As a technical leader, I've shaped engineering strategies, set code quality standards, and fostered cross-functional alignment. At Yotascale (2020-2021), I drove **Kubernetes**-based microservices with **OpenAPI/Swagger**, enhancing consumer-facing analytics platforms. My open-source JSON resume project demonstrates my commitment to technical excellence. I am passionate about mentoring leaders, driving architectural coherence, and delivering user-centric solutions to support Affirm's growth.

Please contact me at 856-408-4027 or rongyj@hotmail.com to discuss further.

Sincerely,
Yongjun Rong
