Hiring Manager
Affirm

Remote, US

Dear Hiring Manager,

I am thrilled to apply for the Senior Software Engineer, Backend (Capital Risk) position at Affirm, where my expertise in building scalable, automated backend systems aligns with your mission to deliver transparent financial solutions. With a Master of Computer Science from Texas Tech University (GPA: 4.0/4.0) and over 20 years of experience, I am eager to optimize loan allocation processes for Affirm's Capital Risk team.

At Biophy (2025-Present), I led the development of an **AWS**-based **Python** and **Terraform** Infrastructure as Code (IaC) framework, automating deployments for an AI platform, reducing errors by 40% through **Kubernetes** and **MySQL** integrations. My **Python**-driven **AWS CloudWatch** alerting system ensured high availability and data quality, critical for Affirm's investor reporting needs. At McKinsey (2021-2025), I architected **Python** and **Kotlin** microservices for mainframe-to-cloud migrations, streamlining data pipelines with **Databricks** and **FastAPI**, aligning with Affirm's goal of reducing manual processes.

As a leader, I've driven quarterly goals, mentored engineers, and set code quality standards, as seen at Yotascale (2020-2021), where I implemented **OpenAPI/Swagger** for extensible microservices. My strong communication fosters collaboration, ensuring alignment with stakeholders. I am excited to contribute to Affirm's financial health by delivering reliable, scalable systems.

Please contact me at 856-408-4027 or rongyj@hotmail.com to discuss further.

Sincerely,
Yongjun Rong
