Hiring Manager
Ascertain

New York City, NY

Dear Hiring Manager,

I am excited to apply for the AI Software Engineer position at Ascertain, where my passion for leveraging AI to solve real-world problems and my extensive experience in building scalable, AI-driven systems align perfectly with your mission to streamline healthcare operations. With over 20 years of expertise in software engineering, specializing in AI, microservices, and cloud architectures, I am eager to contribute to Ascertain's innovative platform and transform nonclinical processes to enhance patient care.

In my current role as Director of Cloud Architecture at Biophy, I architected an AI-powered RAG platform using Python, FastAPI, and openAI APIs, integrating event-driven data ingestion pipelines with AWS (S3, Lambda, SNS) and Terraform for infrastructure management. I also developed a custom CloudWatch alerting system, ensuring robust monitoring and scalability for production-grade AI systems. At McKinsey & Company, I led the development of genAI systems with RAG and multi-agent orchestration, utilizing LangChain and ChromaDB to accelerate data pipeline development on Databricks. My hands-on experience with RAG frameworks, agentic workflows, and PostgreSQL optimization directly aligns with Ascertain's tech stack and goals.

My proficiency in Python, FastAPI, and DevOps tools like Docker, Kubernetes, and Terraform enables me to design and deploy resilient backend services. At Yotascale, I built microservices on Kubernetes and AWS, implementing CI/CD pipelines with Jenkins to ensure reliability. My work with PostgreSQL and event-driven systems (Kafka, RabbitMQ) at Comcast and Biophy equips me to optimize Ascertain's database technologies and AI-driven workflows. Additionally, my startup experience at Gigster, where I delivered scalable infrastructure for microservices, demonstrates my ability to thrive in fast-paced environments and deliver user-centric solutions.

As a technical leader, I have a proven track record of mentoring engineers and fostering collaboration. At Biophy, I guided teams on Clean Architecture and AWS best practices, while at McKinsey, I mentored developers on advanced AI techniques, enhancing team proficiency. My strong communication skills and

user-focused approach enable me to collaborate effectively with product managers and stakeholders, ensuring alignment with real-world healthcare needs. I am inspired by Ascertain's partnership with Northwell Health and its commitment to reducing administrative burdens, and I am eager to bring my expertise in AI, backend development, and mentorship to drive your mission forward.

Thank you for considering my application. I am enthusiastic about the opportunity to contribute to Ascertain's transformative platform and would welcome the chance to discuss how my skills can support your goals. Please feel free to contact me at 856-408-4027 or rongyj@hotmail.com to schedule a conversation.

Sincerely,
Yongjun Rong
