Hiring Manager
Caregentic
[Company Address]
[City, State, ZIP Code]

Dear Hiring Manager,

I am excited to apply for the Senior/Staff Backend Engineer position at Caregentic, where my passion for building scalable, event-driven systems and my extensive experience in microservices, Python, and cloud architectures align perfectly with your mission to transform patient care through innovative technology. With over 20 years of expertise in designing and delivering robust backend solutions, I am eager to contribute to Caregentic's AI-powered platform and drive meaningful impact in healthcare.

In my current role as Director of Cloud Architecture at Biophy, I architected a modular Infrastructure as Code (IaC) framework using Terraform and AWS (S3, Lambda, SNS), supporting an AI-powered RAG platform with a data ingestion system built on Python, FastAPI, and Pydantic. I also developed a custom AWS CloudWatch alerting system, optimizing monitoring and reliability for mission-critical services. At McKinsey & Company, I led the development of genAI systems with event-driven architectures using Apache Kafka, Python, and FastAPI, accelerating data pipeline development on Databricks. My deep expertise in Python 3, async programming, and PostgreSQL optimization, combined with experience in GraphQL and microservices, positions me to excel in building Caregentic's scalable backend services.

My proficiency with your tech stack is well-documented. At Yotascale, I designed microservices using Python, Kubernetes, and AWS, implementing CI/CD pipelines with Jenkins and Docker to ensure reliability. At Comcast, I developed event-driven systems with RabbitMQ and optimized PostgreSQL databases for large-scale applications. My familiarity with Terraform, Kubernetes, and AWS services (Cognito, SES) ensures I can contribute to deployments and infrastructure optimization. Additionally, my work with REST APIs and microservices at Gigster and Oracle aligns with Caregentic's use of Strawberry GraphQL and Apollo Federation, and my healthcare-adjacent experience at Biophy gives me a strong foundation for navigating HIPAA-compliant environments.

As a technical leader, I have a proven track record of mentoring engineers and

driving best practices. At Biophy, I guided teams on Clean Architecture and AWS standards, while at McKinsey, I mentored engineers on prompt engineering and microservice design. My collaborative approach and strong communication skills enable me to work effectively with product teams, DevOps, and clinical stakeholders to deliver pragmatic, high-impact solutions. I am particularly inspired by Caregentic's partnership with Northwell Health, as my experience building real-world-validated systems at Biophy aligns with your commitment to refining technology in clinical environments.

I am passionate about improving healthcare through technology and am eager to bring my technical leadership, end-to-end ownership, and product-minded approach to Caregentic. Thank you for considering my application. I would welcome the opportunity to discuss how my skills can support your mission to enhance patient care. Please feel free to contact me at 856-408-4027 or rongyj@hotmail.com to schedule a conversation.

Sincerely,
Yongjun Rong
