ezCater Hiring Team
Boston, MA

Re: Application for Staff Data Scientist (Remote)

Dear ezCater Hiring Team,

I am writing to express my keen interest in the Staff Data Scientist position, which I discovered on LinkedIn. With over two decades of experience architecting and implementing large-scale, data-driven systems and a recent focus on building GenAI and machine learning platforms, my background aligns perfectly with your mission to transform customer-centric data into intelligent product solutions.

Your job description emphasizes the need for a professional who can drive the development and rapid iteration of models that deliver tangible business value. In my recent role as a Senior Cloud Engineer II at McKinsey & Company, I led the development of a GenAI system with RAG (Retrieval-Augmented Generation) to automate and accelerate the creation of data pipelines. This involved sophisticated prompt tuning to generate PySpark code, designing chunking systems to manage large inputs, and implementing parallel calls to the OpenAI API to improve performance—directly analogous to the model development and prototyping work you’ve described.

Furthermore, my experience is deeply rooted in the B2B/B2C and e-commerce landscape. At Boomi Inc., I engineered integration solutions for leading desktop accounting systems (QuickBooks, MS Dynamics) and ERP systems (SAP, Oracle), connecting businesses and enabling seamless data exchange in a marketplace environment. This has given me a fundamental understanding of the data challenges and opportunities in connecting supply (restaurants) with demand (workplaces).

My technical expertise is a strong match for your stack:

- **Python/SQL:** I use **Python** daily (Pydantic, FastAPI, Asyncio) for building data ingestion systems, AI agents, and backend services. My work consistently involves complex **SQL** and data modeling across databases like PostgreSQL, Oracle, and DynamoDB.
- **AWS & MLOps:** I have extensive hands-on experience with your cited stack, including **AWS** (Sagemaker, Lambda, S3), deploying models as **Docker** containers on **EKS/Kubernetes**, and building event-driven architectures with **Airflow**-like tools such as EventBridge and Step Functions.

- **Leadership & Collaboration:** As a hands-on Director and Lead Architect at firms like Barclays and Yotascale, I have a proven track record of ‘leading by example.’ I have mentored engineers on best practices, established design standards, and collaborated cross-functionally with product and engineering teams to deliver impactful, data-driven solutions.

I am passionate about leveraging cutting-edge data science to solve complex business problems and am excited by the prospect of doing so at ezCater. I am confident that my unique blend of strategic architecture skills and hands-on coding proficiency would allow me to immediately contribute to your team’s success.

Thank you for your time and consideration. I have attached my resume for your review and look forward to discussing this opportunity further.

Sincerely,
Yongjun Rong
