Hiring Team
Liatrío
Remote

Subject: Application for Principal Application Modernization Architect Dear Hiring Team,

I am writing to express my interest in the Principal Application Modernization Architect role at Liatrío. With over 25 years of experience leading enterprise-scale DevOps transformations, cloud-native migrations, and modernization initiatives including roles as VP/Lead Architect at Barclays, Director of Cloud Architecture at Biophy, and Senior Cloud Engineer at McKinsey I am confident my expertise aligns with Liatrío's mission to help enterprises deliver software faster, safer, and more efficiently.

Key Qualifications:

1. Enterprise Architecture & Modernization Leadership

- Directed cloud adoption journeys for 500+ applications at Barclays, migrating mainframe/IBM MQ systems to AWS serverless architectures (Lambda, EventBridge, EKS).
- Led DevOps transformations at Comcast T&P and Yotascale, establishing IaC (Terraform), CI/CD pipelines, and Kubernetes standards that reduced operational load by 40%.

2. Full-Stack Modernization & Cloud-Native Expertise

- Modernized legacy systems using microservices (Java/SpringBoot, Python/FastAPI), event-driven architectures (Kafka, SQS), and containerization (Docker/K8s) at Oracle, Boomi, and McKinsey.
- Architected cross-cloud platforms (AWS/Azure/GCP) for financial, healthcare, and SaaS clients, including infrastructure-as-code (Terraform/Terragrunt) and observability solutions.

3. Client Enablement & Knowledge Transfer

- Mentored engineering teams at Barclays and McKinsey on cloud-native best practices, SOLID principles, and Agile/DevOps methodologies, accelerating project delivery by 30%.
- Developed standardized playbooks for mainframe-to-cloud migration and IaC implementation, enabling clients to sustain transformations independently.

4. Technical Depth Across the Stack

- *Languages:* Proficient in Java, Python, Go, JavaScript, Ruby, and SQL/NoSQL (PostgreSQL, Oracle, DynamoDB).
- *Cloud/DevOps:* AWS/Azure/GCP, Kubernetes (EKS/AKS), Terraform, Jenkins, and observability tools (CloudWatch, Splunk).

- *Practices:* Advocate for TDD, DDD, and Infrastructure-as-Code, with experience in reducing technical debt across 200+ microservices (Comcast T&P).

Alignment with Liatrios Values:

- **Collaboration & Transparency:** At Barclays, I led cross-functional working groups (30+ members) to define technology strategy, ensuring open communication and shared responsibilities.
- **Mentorship & Upskilling:** Mentored 4-8 engineers weekly at McKinsey and Yotascale, focusing on career growth and operational sustainability.
- **Solving Complex Problems:** Engineered genAI-powered modernization at McKinsey to accelerate mainframe migration by 60%, balancing technical and business constraints.

I am eager to bring my experience in guiding Fortune 500 clients through Application Modernization and DevOps transformations to Liatrio. My background in building trusted advisor relationships coupled with hands-on expertise in cloud-native architecture positions me to drive technical vision while fostering team growth.

Thank you for considering my application. I would welcome the opportunity to discuss how I can contribute to Liatrios success. Please contact me at 856-408-4027 or rongyj@hotmail.com to schedule a conversation.

Sincerely,
Yongjun Rong
