**Hiring Manager**

Ontra

**Re: Application for Staff Software Engineer Role**

Dear Hiring Team,

I'm excited to apply for the **Staff Software Engineer** position at Ontra. With over **20+ years of experience** architecting scalable systems—including leadership roles at **McKinsey, Barclays, and Oracle**—I've pioneered AI-driven automation and mentored teams to deliver high-impact solutions. Ontra's mission to transform legal tech with AI resonates deeply with my passion for **building resilient platforms** and fostering engineering excellence.

## Why I'm a Strong Fit

### Technical Leadership

- Led **genAI-powered RAG systems** (OpenAI/LangChain) at McKinsey to automate mainframe migrations and document analysis.
- Designed **event-driven microservices** (AWS Lambda, EventBridge, EKS) and IaC pipelines (Terraform) at Biophy.
- Built **React-based UIs** for analytics dashboards and streamlined CI/CD (Capistrano/Rails) at Comcast.

### AI/ML Innovation

- Architected **vector databases** (ChromaDB/Milvus) for retrieval-augmented generation (RAG).
- Prototyped **AI-augmented workflows** to accelerate contract processing (similar to Ontra's use cases).

### Operational Excellence

- Implemented **observability tools** (Splunk/Dynatrace) and SRE practices for distributed systems.

- Specialize in debugging **complex architectures** and optimizing performance.

### **Why Ontra?**

I admire Ontra's **remote-first culture** and vision for AI-powered legal tech. My background in **scaling cloud-native systems** and **mentoring engineers** aligns perfectly with your needs for:

- Resilient **shared services/APIs**
- **AI/ML prototyping** for legal workflows
- **Engineering best practices**

I'd welcome the opportunity to discuss how I can contribute to Ontra's growth. Thank you for your time—I look forward to connecting.

Best regards,

**Yongjun Rong**
