Hiring Manager  
[Company Name]  
[Company Address]  
[City, State, ZIP Code]

Dear Hiring Manager,

I am thrilled to apply for the Principal Member of Technical Staff position at your organization, where my extensive experience in software engineering, network automation, and cloud-native architectures aligns seamlessly with your need for a technical leader to drive innovative networking solutions. With over 20 years of expertise in designing and delivering scalable distributed systems, microservices, and automation frameworks, I am eager to lead complex projects, mentor teams, and advance your network operating systems and infrastructure.

In my current role as Director of Cloud Architecture at Biophy, I spearheaded the design of Infrastructure as Code (IaC) using Terraform, optimizing AWS resources (EC2, VPC, ALB, IAM) to support an AI-powered platform. I also developed a custom AWS CloudWatch alerting system with Lambda, SQS, and SNS, integrating robust monitoring and automation to enhance system reliability. At McKinsey & Company, I led the migration of mainframe EDA systems to AWS serverless architectures, leveraging EventBridge, Lambda, and EKS, while implementing network automation with Python and Terraform. These experiences demonstrate my proficiency in developing software for network operating systems, automating complex tasks, and ensuring seamless integration with networking hardware.

My deep knowledge of networking protocols (BGP, OSPF, TCP/IP) and technologies (VPN, DNS, DHCP), combined with expertise in Python, Java, and TypeScript, equips me to architect solutions for large-scale enterprise environments. At Yotascale, I designed a cross-cloud cost analytics platform using Kubernetes, Istio, and Terraform, ensuring scalability and observability for microservices. My work with network automation tools like Ansible and scripting for CI/CD pipelines (Jenkins, Bamboo) at Comcast and Gigster further honed my ability to bridge software and networking functions. Additionally, my familiarity with YANG, NETCONF, and API development enables me to contribute to network modeling and integration projects effectively.

As a technical leader, I have a proven track record of mentoring engineers and

fostering collaboration. At Biophy, I guided teams on AWS best practices and Clean Architecture, while at Barclays, I led a 30-member working group to define distributed systems strategies. My ability to interpret complex requirements, provide technical coaching, and collaborate with vendors and product teams ensures alignment with organizational goals. I am particularly excited about your emphasis on network automation and software-driven innovation, as my experience developing reusable tools, such as the open-source JSON resume framework, reflects my commitment to impactful, community-driven solutions.

I am inspired by your mission to advance software solutions for networking, and I am eager to contribute my expertise in distributed systems, network automation, and mentorship to drive your technical objectives. Thank you for considering my application. I would welcome the opportunity to discuss how my skills can support your team's goals. Please feel free to contact me at 856-408-4027 or [rongyj@hotmail.com](mailto:rongyj@hotmail.com) to schedule a conversation.

Sincerely,  
Yongjun Rong
