Subject: Application for Principal Software Engineer Position Dear Hiring Manager, I am excited to apply

for the Principal Software Engineer position at [Company Name]. With over two decades of experience in cloud architecture, distributed systems, and GenAI solutions, I have a proven track record of designing and delivering scalable, resilient, and innovative software solutions across industries such as finance, consulting, and technology. My expertise in AWS, Python, Java, and modern DevOps practices aligns closely with the requirements of this role, and I am eager to contribute my technical leadership and hands-on engineering skills to your team. Currently, as Director of Cloud Architecture at Biophy, I lead the design and implementation of infrastructure as code (IaC) using Terraform, adhering to AWS best practices. I architected a robust AI-powered data ingestion and scraping system for a Retrieval-Augmented Generation (RAG) platform, applying SOLID principles and Clean Architecture to ensure scalability and maintainability. Additionally, I developed a custom AWS CloudWatch alerting system leveraging Lambda, SQS, and SNS, reducing mean time to detection and resolution through proactive monitoring. These achievements demonstrate my ability to deliver complex, cloud-native solutions that drive operational excellence and business impact. At McKinsey Company, as a Senior Cloud Engineer, I spearheaded GenAI systems with RAG and multi-agent orchestration to accelerate mainframe migrations to modern cloud platforms. I designed data pipelines on PySpark and Databricks, integrating ChromaDB and Milvus for efficient vector storage, and migrated complex event-driven architectures to AWS serverless technologies, including EventBridge and Step Functions. My leadership in these initiatives reduced manual effort, improved system reliability, and empowered cross-functional teams through mentorship and standardized practices. My extensive experience spans microservices, event-driven architectures, and enterprise integrations, with proficiency in technologies such as Kubernetes, Terraform, Python, Java, and Node.js. At Yotascale, I architected a cross-cloud cost analytics platform for AWS, Azure, and GCP, introducing a microservice design-first methodology using OpenAPI/Swagger. At Barclays, I directed cloud adoption for over 500 on-premises applications, developing automation tools with Python and Boto3 to streamline AWS infrastructure management. These roles highlight my ability to balance strategic vision with hands-on implementation, delivering solutions that are both innovative and reliable. I am passionate about mentoring teams, fostering innovation, and driving digital transformation. My fluency in English and Chinese, combined with my technical expertise, enables me to collaborate effectively across diverse teams and deliver solutions that align with organizational goals. I am confident that my skills and experience make me a strong fit for the Principal Software Engineer role, and I am excited about the opportunity to contribute to [Company Name]'s success. Thank you for considering my application. I would welcome the opportunity to discuss how my expertise can support your teams objectives. Please feel free to contact me at 856-408-4027 or rongyj@hotmail.com to schedule a conversation.

Sincerely,
Yongjun Rong
