Hiring Manager
xAI
[Company Address]
Palo Alto, CA

Dear Hiring Manager,

I am thrilled to apply for the Network Software and Services for AI (nssAI) Engineer position at xAI, where my passion for building scalable, automation-first solutions and my extensive experience in network infrastructure and software development align perfectly with your mission to accelerate human scientific discovery through AI. With a Master of Computer Science from Texas Tech University (GPA: 4.0/4.0) and over 20 years of hands-on experience in designing and automating large-scale distributed systems, I am eager to contribute to xAI's cutting-edge network management tools for GPU supercomputing fabrics.

In my current role as Director of Cloud Architecture at Biophy, I architected a robust Infrastructure as Code (IaC) framework using Terraform and AWS (EKS, S3, Lambda), automating the deployment and management of a high-throughput data ingestion platform. By integrating Python-based automation scripts and CI/CD pipelines with Jenkins, I reduced deployment times by 40%, ensuring scalable and reliable service delivery. At Barclays, as VP and Lead Architect Engineer, I led the cloud adoption of enterprise systems, designing event-driven architectures with Kafka and ActiveMQ to manage thousands of network interactions with zero-touch provisioning and real-time monitoring. My deep expertise in Python, Go, and TCP/IP, combined with hands-on experience in BGP and network orchestration, equips me to build extensible tools for xAI's complex network fabrics.

My proven track record in collaborating with network engineers and delivering reliable software solutions aligns with xAI's needs. At Yotascale, I developed a cross-cloud analytics platform, implementing microservices with Kubernetes and Istio to ensure low-latency data processing across AWS, Azure, and GCP. I designed custom monitoring systems using Python and Bash, integrating metrics with ELK and Datadog to provide actionable insights, akin to xAI's focus on extensive metrics coverage. My work at Comcast, where I automated build and deployment for over 200 microservices, included developing robust error-handling and logging systems, ensuring rock-solid reliability for distributed systems. These

experiences demonstrate my ability to streamline complex processes and drive automation for large-scale network environments.

As a hands-on leader, I thrive in ambiguity and excel at prioritizing impactful solutions. At McKinsey, I spearheaded mainframe-to-cloud migrations, collaborating with cross-functional teams to deliver secure, scalable architectures while mentoring engineers on modern DevOps practices. My open-source JSON resume project, built with Node.js and CSS3, reflects my initiative and curiosity in exploring cutting-edge technologies, aligning with xAI's flat structure and culture of excellence. I am inspired by xAI's mission and am eager to bring my technical expertise, network automation experience, and collaborative mindset to empower your Network Development Engineers.

Thank you for considering my application. I am excited about the opportunity to contribute to xAI's innovative network solutions and would welcome the chance to discuss how my skills can support your goals. Please feel free to contact me at 856-408-4027 or rongyj@hotmail.com to schedule a conversation.

Sincerely,
Yongjun Rong
