Sully.ai Hiring Team

Dear Sully.ai Team,

I am excited to apply for the Head of Engineering position at Sully.ai. With extensive hands-on experience architecting and implementing agentic AI systems, as well as leading high-performing engineering teams in fast-paced startup environments, I am eager to help Sully.ai transform healthcare access through innovative AI solutions.

Throughout my career, I have designed and scaled agentic systems using cutting-edge LLMs, integrating them into production-grade software that supports real users and real-time decision-making. My expertise spans both Python and Node.js, and I have led teams building robust applications with React and Typescript. I am deeply familiar with agentic frameworks, LLM fine-tuning, and the unique challenges of deploying GenAI in production.

At my previous roles, I have built and enhanced core product components from the ground up, often collaborating directly with founders and cross-functional teams. I thrive in environments that demand both strategic vision and hands-on technical leadership, and I have a proven track record of bias for action and delivering results under tight timelines.

I am also well-versed in modern DevOps practices, cloud services (GCP, Azure, AWS), and both SQL and NoSQL databases. My experience with LLMOps and AI evaluation ensures that I can help Sully.ai maintain a high bar for quality and innovation as you scale your engineering team and product capabilities.

I am inspired by Sully.ai's mission to enhance healthcare efficiency and reduce errors through AI, and I would be honored to contribute my skills and leadership to your team.

Thank you for your consideration. I look forward to the opportunity to discuss how I can help drive Sully.ai's engineering and product vision forward.

Sincerely,
Yongjun Rong
