

Yongjun Rong

Cherry Hill, NJ, USA, 08003 | US Citizen | 856-408-4027 | rongyj@hotmail.com | LinkedIn | GitHub

PROFESSIONAL SUMMARY

Accomplished DevOps and Infrastructure Engineer with extensive expertise in cloud-native technologies, Kubernetes orchestration, and Istio service mesh implementations. Proven track record in designing scalable Infrastructure as Code (IaC), driving DevSecOps initiatives, automating complex CI/CD pipelines, and integrating advanced localized AI models into enterprise workflows.

PROFESSIONAL EXPERIENCE

Intuitive.ai | Cherry Hill, NJ

Oct 2025 – Current

Principal Cloud and Platform Architect (JPMC)

- Designed and implemented comprehensive AWS EKS/ECS architectures and an Istio service mesh framework, enabling a secure, multi-tenant on-demand platform for hundreds of developers.
- Architected a robust AWS Secrets Manager (ASM) solution for Java Spring Boot microservices, eliminating hardcoded local .env files and encrypting secret data at rest using AWS KMS.
- Engineered a comprehensive observability stack by deploying Splunk Universal Forwarder (UF) sidecars and instrumenting Dynatrace OneAgent, significantly reducing Mean Time to Resolution (MTTR) for production incidents.
- Developed modular Terraform code to automate the dynamic provisioning of service mesh configurations, task definitions, and IAM roles.

Biophy | Cherry Hill, NJ

Feb 2025 – Oct 2025

Director of Cloud Architecture

- Led the transformation of legacy AWS infrastructure into standardized Infrastructure as Code (IaC) using Terraform/Terragrunt, aligning resources with the AWS Well-Architected Framework.
- Architected a robust, intelligent data ingestion and web scraping pipeline for an AI-powered RAG platform utilizing Python, Django, Pydantic, and LangChain.
- Developed a proactive monitoring and custom alerting ecosystem leveraging AWS CloudWatch, EventBridge, Lambda, SQS, and SNS for multi-channel notifications and automated response workflows.

McKinsey & Company | Cherry Hill, NJ

Dec 2021 – Feb 2025

Senior Cloud Engineer II (Associate)

- Built a multi-agent genAI platform leveraging OpenAI and RAG (ChromaDB/Milvus) to automate and accelerate the migration of mainframe applications (Cobol/BMS) to modern cloud-native technologies (Java/React).
- Engineered a genAI system to accelerate PySpark and Databricks data pipeline development, utilizing advanced prompt tuning and asynchronous, parallel API calls.
- Refactored a complex mainframe Event Driven Architecture (EDA) system to an AWS serverless ecosystem utilizing EventBridge, Lambda, Step Functions, SQS, and an EKS-based SpringBoot router.

Yotascale | Cherry Hill, NJ

Dec 2020 – Dec 2021

Staff Engineer

- Architected a highly scalable cross-cloud (AWS, Azure, GCP) cost analytics and management platform.
- Championed an OpenAPI/Swagger microservice design-first methodology, building dynamic analytics microservices deployed to EKS with Istio service mesh and CI/CD pipelines.

Gigster Inc. | Cherry Hill, NJ

Mar 2020 – Nov 2021

Technical Infrastructure/DevOps Architect

- Designed a fully automated AWS stack for image manipulation microservices within an EKS cluster using Terraform, Terragrunt, and Helm.
- Automated CI/CD provisioning, dynamic Route53 configurations, and OIDC-based IAM role access for Kubernetes service accounts.

Barclays | Wilmington, DE

Jun 2017 – Feb 2020

VP, Lead Architect Engineer

- Directed the enterprise technology transformation from on-premises monolithic systems to cloud-native microservices and Event Driven Architectures (EDA).
- Led the cloud readiness assessment and AWS migration strategy for over 500 on-premises applications spanning Contact Center, Merchant Services, and Fraud domains.

Oracle | Redwood, CA

May 2014 – Jun 2017

Lead Software Engineer

- Pioneered the adoption of Docker Swarm, Compose, and Stack to create scalable CI/CD test environments for Cloud SDKs and Java connectors.
- Developed a robust SDK and WSDL regeneration framework for seamless Oracle SOA Suite integration with major SaaS and on-premises ERP systems.

Comcast T&P | Philadelphia, PA

Oct 2010 – Apr 2014

Senior Cloud DevOps/Infrastructure Automation Engineer

- Invented and managed an "AutoBuild" system to streamline CI/CD, release, and dependency management for over 200 microservices using Ruby, Bash, Bamboo, and Jenkins.
- Built a two-phase, zero-touch bare-metal Linux server bootstrap system for HP hardware using PXE, DHCP, and Cobbler.

Boomi Inc. | Berwyn, PA

Nov 2006 – Oct 2010

Senior Software Engineer

- Developed a scalable, on-demand SOA integration platform (iPaaS), designing automated message frameworks and dynamic reflection connector systems.
- Architected the high-availability cloud production environment across AWS EC2 and S3, implementing distributed caching, clustering, and performance monitoring.

EDUCATION

Master of Computer Science | Texas Tech University, Lubbock, TX | *GPA: 4.0/4.0*

Master of Engineering (Hydraulic Fluid Control) | Shanghai JiaoTong University, China

Bachelor of Engineering (Engineering Machine) | Changsha Railway University, China
